

Introducing the

350 MIXER Drone Fill

Spray operators choose SCUD products for:

Simplicity

Our products are easy to install and operate, allowing for foolproof chemical handling without ever compromising on safety.

Efficiency

When it comes to mixing and handling your chemicals efficiently and safely look no further than SCUD. Our products provide you with one place to do all of your chemical mixing in a closed circuit. Minimising your time spent measuring and mixing, leaving you with more time to do what you do best.

Safety

Safety is something we take very seriously here at SCUD. Our products combine to form a single chemical handling system, nullifying the risk of chemical spillage and mitigating the environmental impact for you, your team and your business.

Affordability

Efficient products don't have to equate to exorbitant prices. Our products are built with simplicity and durability in mind, meaning you get safer and quicker chemical handling that doesn't break the bank.

Durability

Our products are made in Western Australia from materials sourced locally, from quality suppliers and built to last in Australia's harsh conditions.

Simpler, safer chemical handling

SCUD products are designed to make the handling and mixing of chemicals safer for your grounds team.

The 350 Mixer is perfect for any business looking to reduce downtime and increase productivity.

A one stop shop for your chemicals to be measured, mixed and transferred into your sprayer, cleaning the drums, with all the rinse water going back into the sprayer, leaving the ground dry and contaminate free.

Some key benefits the 350 Mixer provides:

Speed

The 350 Mixer can fill multiple machines while maintaining agitation. The fill is a bleed off allowing a hand trigger nozzle for filling.

Huge Granule Capacity

The secret to the success of this machine is the pump. At 550 l/min even the most stubborn granules (ferrous sulphate) will be gone in seconds. The open impellor pump means no blockages allowing all types of granules and liquids to be mixed.

Minimal Environmental Impact

The SCUD drum washer has the capacity to clean and rinse 1- 20ltr chemical drums, transferring the rinse water into the sprayer which saves time on your fill and also saves the environment.

IBC Ready

The third 3-way tap on the SCUD Mixer is a tee port tap which is a point where 1000ltr IBC's can be connected allowing chemical to be cycled through an IBC for extra capacity, it is also the tank drain.

How does the 350 Mixer stack up against other chemical handlers on the market?

- ✔ The best and fastest granule mixing capacity on the market
- ✔ Fast fill from IBC's at 300 litres per minute at the flick of a tap
- ✔ The SCUD introduces a system that will improve the safety and speed of your filling process
- ✔ Manufactured in Australia

Why the 350 Mixer?

- ✔ 100% Australian owned
- ✔ Closed chemical mixing system
- ✔ Unrivalled safety and OH&S
- ✔ Affordable
- ✔ Knowledgeable team
- ✔ Safe and simple to use

About the 350 Mixer

The Pump

The secret to the success of this machine is the pump. At 550ltr/min even the most stubborn granules (ferrous sulphate) will be gone in seconds. The open impellor pump means no blockages allowing all types of granules and liquids to be mixed. The machine set up uses three way ball valves on the inlet and outlet, this allows the SCUD to self fill then mix the product thoroughly in a closed system before being discharged. The SCUD mixer can be left mixing the next batch while your spraying.

Waterfold Mixer

The waterfold granule mixer is adjustable which allows the operator optimal mixing for each particular product. The 3-way ball valve inside the tank allows the mix to be sent all to the bottom or all to the top and every where in between making sure the best mix is available for each different product. With a 20ltr drum rinser and huge granule mixing capacity it's simple plumbing makes it easy to clean out and easy to use, and can fill multiple machines.

Internal Measuring Scale

The internal scale of 80ltr helps eliminate the use of buckets and jugs when measuring smaller quantities of chemical. For accuracy under 1ltr we still recommend using a jug.

Drum Washer

The drum washer will rinse all types of drums from 20ltr down to 1ltr as well as chemical jugs and buckets. The SCUD tank rinser cleans the SCUD tank after each use.

IBC 3-way Fill

The 3-way valve allows product to be inducted from a 1000ltr IBC using a 2" bottom fill, allowing chemical to be cycled through an IBC for extra capacity. This is a great tool for liquid fertilizer and other liquid products available in 1000ltr IBC's.

Product Specifications

350 Mixer	
Model Number	SM350E550
Length (mm)	1050
Width (mm)	900
Height (mm)	1100
Weight (kg)	65
Capacity (L)	350
Pump Flow (L/min)	550
Pump types	Centrifugal
Pump Motor Size	2HP 1.5KW
Pump Motor	240volt
Electrical draw	10Amp
Cord length	1.8m
Fitting size Outlet (Press)	2"
Fitting Size Inlet (Suction)	2"
Tank calibration	1L Inside 5L Outside
Recirculation	Yes
20L Drum Washer	Yes
Waterfold Granule Mixing	Yes
Wheels/Skid	Skid
